The UWT 6008 Ethercat weight transmitter has been designed by Pavone Systems. This weight transmitter is a unique product since it is suitable to all industrial applications where it is necessary to know the load distribution on the different cells. The UWT 6008 Ethercat weight transmitter is able to monitor all load cells and generate alarms due to excessive cell signal drift, missing connections, failure of one cell and unbalanced weight distribution. The emulative control allows the weighing system to work even in case of one cell failure until its replacement. The Software Optimation is given for free. This Software allows you to run certain activities such as calibration or monitoring directly from your computer. The Optimation software is provided by Pavone Systems and guarantees a perfect instrument run.
